

LM-79-08 TEST REPORT

for

P.Q.L., Inc.

2285 Ward Avenue / Simi Valley, CA 93065

LED Tube

Model: 91832, 11W-4FT-65K

11W-4FT-65K was selected as the representative model. All measurements are the same except CCT.

Laboratory: Leading Testing Laboratories

NVLAP CODE: 200960-0

SAMPLE PHOTO

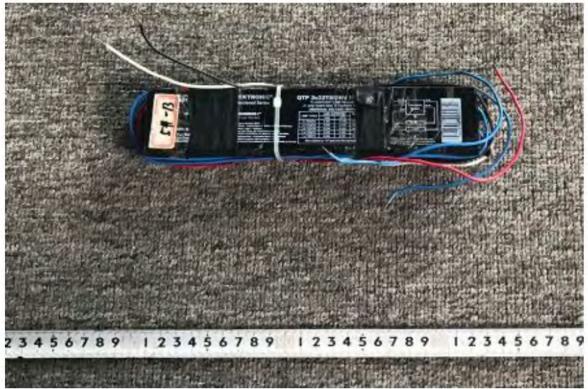

Figure 1- Overview of the sample

Equipment Under Test(EUT)

Name : LED Tube

Model : 11W-4FT-65K

Electrical Ratings : 120-277V, 50/60Hz, 11W

Product Description : G13 Base, 6500K

LED Tubes supplied by a high frequency fluorescent lamp ballast:

QTP 2x32T8/UNV ISN-SC

Manufacturer : P.Q.L., Inc.

Address : 2285 Ward Avenue / Simi Valley, CA 93065

TEST RESULTS

Test ambient temperature was 25.4°C.

Base orientation was horizontal. Test was conducted without a dimmer in the circuit.

The stabilization time of the sample was $\underline{60}$ minutes, and the total operating time including stabilization was $\underline{65}$ minutes.

Table 4: Test Equipment List

TEST METHODS

Seasoning of SSL Product

For the purpose of rating new SSL products, SSL products shall be tested with no seasoning. Therefore, no seasoning was performed.

Sphere-Spectroradiometer Method- Photometric and Electrical Measurements

A Labsphere Model CDS 2100 Spectroradiometer and Two Meter Sphere was used to measure correlated color temperature, chromaticity coordinates, and the color rendering index for each SSL unit. The coating reflectance of each sphere is 98%. The measure geometry is 4π . Self-absorption correction is conducted in testing. Bandwidth of spectroradiometer is 350nm-1050nm.

Ambient temperature was measured at a position inside the sphere. Each SSL unit was operated on the client provided driver at the rated input voltage in its designated orientation.

The stabilization time typically ranges from 30 min (small integrated LED lamps) to 2 or more hours for large SSL luminaires). It can be judged that stability is reached when the variation (maximum – minimum) of at least 3 readings of the light output and electrical power over a period of 30 min, taken 15 minutes apart, is less than 0.5 %.

Electrical measurements including voltage, current, and power were measured using the Yokogawa Power Analyzer.

The standard reference of the integrated sphere system is halogen incandescent lamp, the intensity distribution type is omni-directional, and is traceable to the National Institute of Standards and Technology.

The uncertainty of integrating sphere system reported in this document is expended uncertainty is 2.1% with a coverage factor k=2.
